Candock's distribution network covers every continent. Our company has 40 years of experience and is constantly expanding. Candock is a world leader in the engineering, manufacture, distribution and installation of modular floating systems. We have proven expertise in both large- and small-scale projects.

Innovation and quality...

Candock, often imitated but never equalled.

From the beginning, Candock's mission has been to develop, produce and market modular floating systems adapted to our clients' needs by participating in the development and growth of our partner companies, continually innovating and developing new products of superior quality.

We always do more!

Thanks to our cutting-edge technology, the expertise of our highly qualified employees and our recently expanded plant equipped with modern, certified equipment, Candock offers the absolute best service in turnkey projects whatever the project's scale. We have the ability to manufacture equipment and accessories that meet your needs and that are perfectly adapted to your projects. Candock products are manufactured according to the strictest standards in the industry (ISO 9001:2008, 14001:2004). Our products undergo stringent quality control measures. Your satisfaction is our sole motivation.

At Candock, we have succeeded in pairing quality with reasonable prices. Our products will give you satisfaction for many years, and our service will exceed your expectations.

CANDOCK : Make it an investment, not an expense!

★ The exceptional lifespan of our products make them the ideal choice; during that lifespan you would have to purchase two or three aluminum or wooden docks. Also, our products can withstand the most severe weather conditions, which are more and more variable. With their low profile and colour, they blend very well with the surroundings. Your initial project layout can be undone and reconfigured for a totally new project. That means a global cube inventory for many different purposes, applications and projects. Work platform, temporary bridge, permanent bridge, transition walkway from the water to a permanent structure such as an oil rig, an observation post, a defense station, etc... Transform your bridge into an heliport, a transport barge, a marina for defense vessels. Whatever the applications, your investment will be profitable for a long time.

TURNKEY AND CUSTOMIZED SYSTEMS

Candock offers a turnkey service for all your projects. We have the ability to manufacture equipment and accessories that meet your needs and that are perfectly adapted to your projects, to install and anchor your set-up, and to offer you a turnkey solution using a single supplier. You'll save considerable time not having to deal with several intermediaries. You'll also avoid a number of other potential pitfalls, such as errors in the compatibility of accessories and varying delivery times.

Candock's qualified staff can help you develop your project. We also offer a full supervision service. We have extensive experience in large-scale international projects. The quality of our installations, our products and our service is recognized worldwide.

THE CANDOCK G2 MODULAR FLOATING SYSTEM

The Candock modular floating system is a truly revolutionary product! The era of massive wooden, metal and cement docks is over. Our high quality plastic system is guaranteed for life; it's environmentally friendly, and requires no maintenance. Easy to use and reliable, it provides unlimited configuration and application options. The Candock modular floating system has become a must for industrial, commercial, marina and military facility docks or any other application. When compared to wooden, metal or cement docks, its advantages are crystal clear: just consider its exceptional lifespan and its high resistance to the most severe weather conditions.

Modular Floating System
Candock

Standard colours: BEIGE and GREY.
Any other colour available by special request.

CHARACTERISTICS

Material/Composition :

High-density polyethylene resin

Colours :

Grey, beige and any other colour by special request

Surface :

Anti-skid

Dimensions :

L x W : 48 cm (19") x 48 cm (19")
H : 35 cm (14")

Dimensions (low profile cube) :

L x W : 48 cm (19") x 48 cm (19")
H : 23 cm (9")

Weight :

Cube: 5.5 kg (12.1 lbs.)
Low profile cube : 5 kg (11 lbs.)

Floating capacity :

Cube: 68 kg (150 lbs.) per cube
or 296 kg per sq. m. (60 lbs. per sq. ft.)
Low profile cube : 50 kg (110 lbs.) per cube
or 210 kg per sq. m. (44 lbs. per sq. ft.)

ADVANTAGES

Unlimited number of potential configurations

This revolutionary system's floating cubes meet the precise needs of any shoreline, and can be assembled to create whatever shape and size you like. The configuration options are limitless.... It's all up to your imagination!

Easy and quick assembly

The Candock system is simple: the blocks are held together tightly and firmly with special connecting pins. All parts are lightweight and easy to handle.

Environmentally friendly

The modular structure's components do not oxidize or deteriorate in any way. Thus, your CANDOCK dock is an investment, not an expense..

Lightweight, sturdy and safe

The safety aspect of nautical products is critical. This is why the Candock system has undergone rigorous testing. Its safety features include excellent dock stability, high load capacity, an anti-skid surface and the absence of metal parts.

Maintenance-free (100% plastic)

With the Candock system, the concept "maintenance-free" means ZERO maintenance – no more, no less. No more lost time, no more expense, and no more work to be done on a conventional wooden or metal dock year after year.

Pollution and UV resistant

Made of high density polyethylene resin, Candock cubes are remarkably resistant to impact, climate change, the adverse effects of water and sun and a wide range of chemical products.

G2 SERVICE Channel SYSTEM

Candock is proud to present the next generation of service channels for docks. After years of studying current systems, Candock has developed a patented service channel technology beyond compare. This unique system is a two-part product: the base and a service cover. No hardware is required; the service covers are fixed with the dock screws. This multi-purpose system provides easier access to services. Lights, service terminals, emergency pedestals and fire stations and other accessories can easily be connected to the covers. Its modularity provides you with more possibilities than any other system. It even allows you to light your dock from the interior thanks to its unique patented LED lighting technology.

JetSLIDE

By CanDOCK

- SUPPORT SURFACE EVENLY DISTRIBUTES THE WEIGHT.
- FOAM FILLED INTERIOR.
- UNIQUE GROOVE SYSTEM MAKES LAUNCHING AND DOCKING EASIER.
- SAFETY PLATE**
Used to adapt to watercraft of intermediate lengths.

"V" OPENING PROVIDES EFFORTLESS DOCKING AND BRINGS THE ENGINE CLOSER TO THE DOCK.

THE G2 JETSLIDE DRY DOCK

The JETSLIDE is a unique patented dry dock system that protects the hull of your watercraft from the accumulation of shellfish and marine vegetation affecting the performance of your boat. With the JETSLIDE, you'll eliminate both maintenance costs and premature wear and tear on your watercraft. It's easy to assemble, clean, esthetic, very flexible, and compatible with different types of watercraft. The JETSLIDE also enables you to safely walk around your pleasure craft. No more metal structures obstructing your view. The JETSLIDE requires no maintenance.

The JETSLIDE has the same basic advantages as our dock system.

The JETSLIDE has been especially designed to evenly distribute the watercraft's weight, thus preventing any excessive pressure on the hull. Assembled with no moving parts that are easily damaged or that require regular maintenance, the JETSLIDE is made of new-generation plastic providing you with a top-quality product that features cutting-edge technology. It's both lightweight and resistant to impact, chemical products, UV rays and weather variations. It will remain afloat, even under the worst conditions, thanks to its foam filled interior, which makes it very resistant.

Other companies sell products... Candock sells solutions!

The JETSLIDE system also features the best floating assistance system on the market – The AIR ASSIST. Used for heavier watercraft, this system keeps the JETSLIDE's dimensions to a size suitable for marina spaces or cramped locations. The system is compact, lightweight, durable and easily installed. It is also quick and easy to operate.

AIR ASSIST

CHARACTERISTICS

Material/Composition :
High-density polyethylene resin

Colours :
Grey, beige and any other colour by special request

Dimensions :
H: 38 cm (15")
L: 288 cm (114")
W: 96 cm (38")

Weight :
JetSlide: 68 kg (150 lbs.)

JETSLIDE stabilizing bar
Keeps the structure rigid and ensures optimal flotation.

GANGWAYS

Focusing on turnkey solutions, Candock has developed the most complete line of gangways in the industry. Made of lightweight material that does not rust, limits noise and requires no maintenance, they are adapted to the nautical environment. Our gangways can easily be customized to your needs, thanks to a full line of related accessories.

What's more, Candock can adapt to your specific requests as a result of its exceptional engineering department and customized manufacturing service. Contact us to discuss your gangway needs, or any other project you have in mind.

DECKING
Non-slip, maintenance-free plastic.
Choice of two colours matching the cubes.

GROUND ANCHORAGE
Enables a gangway to be anchored to the ground.

SLIDER
Enables a gangway to move over the dock without damaging it.

HANDRAIL
Increases the gangway's rigidity and safety.

REINFORCEMENT
Used to increase a gangway's resistance.

HINGE
Allows an econo-type gangway to be connected directly to a Candock dock.

ROLLER
Enables a gangway to move over a rigid surface.

TRANSIT PLATE
Enables easier access to the gangway (wheelchairs, carts, etc.).

DEPARTURE ANGLE
Enables a gangway to be attached to a structure.

NOTE :
Gangways and accessories are available in economy, standard or high-resistance versions.
